PROFILE

Computer Science graduate building solo Unity games for PC and mobile. Experience integrating gameplay, save/load, inventory, progression, reward flows, UI, audio and Shader Graph effects, with playable projects on itch.io and hands-on Android testing.

TECHNICAL SKILLS

Unity: Unity 6, C#, URP, ScriptableObjects, prefabs, uGUI, Animator, NavMesh, Shader Graph, raycasts, LineRenderer, object pooling, JSON/PlayerPrefs persistence

Tools: Git, GitHub, JetBrains Rider, Blender for basic geometry and Unity import

Additional engine experience: Unreal Engine 5.6, Blueprint editing, landscape materials

SELECTED UNITY PROJECTS

Solo Unity projects covering gameplay integration, scene setup, UI, shaders and playtesting.

MergeForge | Mobile merge game

In development | Unity, C#, uGUI, Rigidbody | Gameplay video in portfolio

- Integrated a 56-cell merge board with five generator tiers, 12 normal item levels, energy, cooldowns, upgrades, stash inventory and timed bubble items.
- Connected JSON/PlayerPrefs save/load for board items, inventory slots, orders, currencies, progression and timers; protected rejected saves from overwrite during failed boot.
- Integrated and tested effort-based ordinary orders using available generators and expected production taps. Validation covered 60 generator/target combinations; stable order identities preserve held requirements and rewards across reloads.
- Connected daily login/streak rewards, idle rewards, double-coin bonuses, audio, particles and portrait UI. Integrated eight game-side rewarded-ad placements with daily caps and mock testing; live SDK validation remains pending.
- Resolved rapid-drag sticking by isolating Rigidbody interpolation restoring an old pose. Verified the fix on PC, a physical Android APK and Unity Remote; integrated pooled-item lifecycle and presentation-only drag easing.

Refract | 3D laser puzzle

Playable project | Unity, C#, URP, Shader Graph | [Play project](#)

- Built colour-routing puzzles with rotating mirrors, raycast reflections, LineRenderer beams and barriers; designed level layouts around readable paths and obstacle placement.
- Integrated saved progress and audio feedback alongside puzzle interactions, and published a playable build on itch.io.
- Created primitive scene geometry and custom Shader Graph materials, including emissive, holographic and dissolve effects; refined mirror controls and camera framing through playtesting.

Dinesh Jataprolu | Unity Developer

EXPERIENCE

Practice School Intern | CultivateU | 2025

Kisan Sena | Unreal Engine Department

- Contributed to game documentation and scene development in Unreal Engine 5.6, including game design documentation, environment assembly, asset management and Blueprint editing.
- Imported and customised houses, roads and props; assembled asphalt road networks and worked with layered soil, farm-soil and grass landscape materials.
- Supported scene testing and iteration, combining documentation work with practical asset placement and environment setup.

Unity Workshop Mentor | Mayavi Club, KL University | 2024

- Taught Unity fundamentals at the Game Craft Hackathon on 8–9 November 2024, for approximately 150 students.

ADDITIONAL UNITY PROJECTS

Ember & Tide | Action RPG prototype

Also developed as Zero Heir | Unity, NavMesh, Animator | [Play project](#)

- Integrated third-person movement, a follow camera, and fire/water abilities with enemy-specific elemental damage: water counters fire enemies, while fire counters ice enemies.
- Set up simple NavMesh enemies that follow and attack the player, and integrated character animations into the scene.
- Used free Unity character assets and Mixamo animations; created shader effects by following tutorials and adapting them within the project. Handled scene assembly, gameplay integration and playtesting.

Apex Drift | Driving prototype

Unity, Blender | Archived gameplay recording in portfolio

- Assembled a driving course from basic shapes created in Blender and imported them into Unity; integrated an Asset Store car model into the scene.
- Integrated checkpoints, stunt gameplay and particle effects into the driving prototype. Work is preserved through an archived gameplay recording; no playable build is currently offered.

EDUCATION

B.Tech in Computer Science and Engineering | KL University | 2026

Specialisation: Game Development and UI/UX | CGPA: 9.28/10

CERTIFICATION

Unity Certified User | 2024 | Score: 907/1000
